1.	Statement		
	Novelty (N)	Claims <u>1-6</u>	YES
		Claims _____	NO
	Inventive step (IS)	Claims <u>1-6</u>	YES
		Claims _____	NO
	Industrial applicability (IA)	Claims <u>1-6</u>	YES
		Claims _____	NO
2.	Citations and explanations (Rule 70.7)		
	Reference is made to the following documents:		
	D4: EP-A-0 561 153 (HYDROMATIK GMBH; BRUENINGHAUS HYDROMATIK GMBH) 22 September 1993 (1993-09-22).		
	D4 is considered to be the closest prior art and discloses a device for controlling the total displacement of two pumps, 2 and 42, the delivery volume of which can be adjusted by means of a total displacement control valve, 18 and 58.		
	The claimed total displacement control device differs from that of D4 in that, on one valve piston of each total displacement control valve, there is a measuring surface to which a working pressure of the - in each case - other pump is directly applied, and in that a force that is proportional to the displacement of one pump can be applied to the valve piston of the associated total displacement control valve of said pump in the same direction as the hydraulic force acting on the measurement surface.

Box No. V**Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

Thus, the present invention addresses the problem of devising a total displacement control device requiring no more parts than those for a separate displacement control system.

None of the prior art documents contains or suggests anything that might indicate the features of claim 1 in combination.

The invention is clearly industrially applicable.

The dependent claims relate to further embodiments of the unit according to claim 1 and, in consequence, likewise satisfy the requirements of the PCT in respect of novelty and inventive step.
